Art Unit: 1648

DETAILED ACTION

1. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to **Group Art Unit 1648**. Claims 1-25 are pending.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-17, drawn to a method of producing a Ross River virus and antigen, classified in class 435, subclass 70.1.
 - II. Claims 18-23, drawn to a preparation and vaccine of Ross River virus antigen, classified in class 424, subclass 184.1.
 - III. Claim 24, drawn to a method of immunizing a mammal against Ross River virus, classified in class 435, subclass 5.
 - IV. Claim 25, drawn to a method of preparing immune globulin specific against Ross River virus, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

a) Groups I, III and IV are distinct methods that require different method steps and have different modes of operation, function and effect. Group I is drawn to a method of producing antigen while Group III is drawn to a method of immunizing with an antigen. Group IV is drawn to a method of preparing immune globulin against an antigen. These methods are clearly distinct inventions.

b) Groups I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as

Art Unit: 1648

claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another process. Known antigens of the virus can be produced synthetically if the amino acid sequence is known.

c) Groups II and (III-IV) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used in a materially different method such as immunization, detecting antibodies, infectivity assays or generating antibodies.

Because these inventions are distinct for the reasons given above and the literature search required for one group is not co-extensive for any other group, and therefore burdensome, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

Papers relating to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 located in Crystal Mall 1. The Fax number
